

Today 8:24 PM

here is the logo
now start again from installing node.js again

Absolutely. We'll **restart from zero**, and this time we'll use your actual Cyber Warriors logo from the beginning. 🔥

🟡 STEP 1 — Install Node.js

Since you're on Windows, we'll install the **LTS version**, not the experimental/current version.

Right now, the official Node.js site lists **Node.js v24.20.0 LTS**.  Node.js

1. Open the official Node.js download page

[Download Node.js LTS from the official website](#)

You should see something like:

Node.js v24.20.0 LTS

Choose the **Windows Installer (.msi)** for your computer.

🟡 STEP 2 — Install Node.js

After downloading the `.msi` file:

Open it

You'll see:

Welcome to the Node.js Setup Wizard

Click:

Next

Then:

I accept the terms in the License Agreement

☒ Check it.

Click:

Next

Installation location

You'll see something like:

Don't change this.

Click:

Next

Features

Leave everything as default.

Click:

Next

Tools for Native Modules

If you see an option such as:

Automatically install the necessary tools...

You can leave the default settings.

Click:

Next

Then:

Install

Windows may ask for administrator permission.

Choose:

Yes

Wait for the installation to finish.

Then:

Finish

STEP 3 — Restart your terminal

This part is important.

If you already have Command Prompt, PowerShell, or VS Code open, **close them completely**.

Then open:

Command Prompt

You can do:

```
Windows key  
↓  
type: cmd  
↓  
Enter
```

Now type:

```
Bash  
  
node -v
```

You should get something similar to:

```
v24.20.0
```

Then:

```
Bash  
  
npm -v
```

You should get a version such as:

```
11.x.x
```

✅ If both commands show versions

Node.js is installed correctly.

🟡 STEP 4 — Install VS Code

We'll use VS Code to actually build Cyber Warriors.

Download Visual Studio Code

The official VS Code documentation recommends the Windows **User Setup** for most people. [Visual Studio Co...](#)

Download:

Windows → User Installer

Then install it normally.

You can leave the default options.

STEP 5 — Check VS Code

Open VS Code.

Then press:

```
Ctrl + `
```

That opens the built-in terminal.

You should see something like:

```
PS C:\Users\YourName>
```

Now type:

```
Bash
```

```
node -v
```

and:

```
Bash
```

```
npm -v
```

Again, both should show version numbers.

STOP HERE

Don't create the React project yet.

First, do only these things:

1. Install **Node.js LTS**
2. Install **VS Code**
3. Open VS Code
4. Open its terminal

5. Run:

Bash

```
node -v
```

Bash

```
npm -v
```

If both work, send me the **two outputs**.

Then I'll take you to **STEP 6 — creating the actual** Cyber Warriors **project**, and we'll immediately start building the real website with your **gold/black CW logo**, rather than using the default Vite page.

↳ ● STEP 3 — Restart your terminal This part is important. If you already have Command Prompt, PowerShell, or VS Code open, close them completely. Then open: Command Prompt

where it is vs code or node.js?

Ah, you mean **where to find Command Prompt**—not VS Code or Node.js. 😊

Open Command Prompt on Windows

The easiest way:

1. Press the **Windows** key on your keyboard.
2. Type:
Command Prompt
3. Click **Command Prompt**.

You'll get a black window that looks roughly like:

```
Microsoft Windows [Version ...]
```

```
C:\Users\YourName>
```

Then run these two commands, one at a time:

Bash

```
node -v
```

then:

Bash

`npm -v`

You **don't** need VS Code for this step.

-  **Node.js** = the software we installed
-  **Command Prompt** = where we check that Node.js works
-  **VS Code** = where we'll write the Cyber Warriors website

Send me what you get after `node -v` and `npm -v` , and I'll guide you to the next step.

↳ `npm create vite@latest cyber-warriors -- --template react`

show this

Yes — that screen is correct. 👍

Vite is asking:

Which linter to use?

You currently have:

- Oxlint
- ESLint

👉 **Do this:**

Leave **Oxlint** selected and press:

Enter

That's it.

Then Vite will continue creating the `cyber-warriors` project.

You may see more questions afterward. **Don't worry if they appear.** Send me a screenshot of the next screen, and I'll tell you exactly what to select.

Once it finishes, **don't run anything else yet**—we'll continue from there.
