

Yes. Now that **Player Sign-Up** and **Admin Login** are separated, the next step is:

STEP 3 — Database Architecture

Before we write any code, we should finalize **exactly what information the website will store and how everything connects**.

This is especially important because your whole system is centered around **Solo tournaments → Results → Stats → Ranking → Awards → Player Profiles → News**.

3.1 Main database structure

I recommend this structure:

CYBER WARRIORS DATABASE

- └─ Admin permissions
- └─ Activity logs

3.2 Users

This is the important part regarding what you just told me.

A Google account can be connected to a **player account**, but that does **not** make the person an admin.

For example:

We'll store something conceptually like:

```

User
└─ User ID
└─ Google ID
└─ Google email
└─ Name
└─ Profile picture
└─ Account type
└─ Created date
  
```

Account type could be:

```

PLAYER
MATCH_ADMIN
OWNER
  
```

Google recommends using the unique Google `sub` value as the account identifier rather than using the email address as the permanent identifier. The Google ID token should also be verified on the backend before creating the session.  Google for Deve... +1

So our system will be:

Player

Google Sign Up → Player account → Player profile

Match Admin

Google Sign In → Backend checks approved account → Limited Control Panel

Owner

Google Sign In → Backend recognizes owner → Full Control Panel

Google also supports One Tap and automatic sign-in for returning users where the browser/account conditions allow it.  Google for Deve... +1

3.3 🧑 Player database

This will be one of the most important tables.

Each player gets **one permanent Cyber Warriors Player ID**.

Example:

```
CW-0001
CW-0002
CW-0003
...
CW-0070
```

Player information:

```
Player
|
|— Player ID
|— User ID
|— Full Name
|— In-game Name
|— Player Photo
|— Country
|— Join Date
|— Current Status
```

```
|  
├─ COBEG Player ID  
└─ COBEG Profile Data
```

Very important:

We will keep:

COBEG data

and

Cyber Warriors data

separate.

For example:

PLAYER: Nion

COBEG

```
├─ COBEG matches  
├─ COBEG wins  
├─ COBEG ranking  
└─ COBEG achievements
```

CYBER WARRIORS

```
├─ CW Solo matches  
├─ CW Solo wins  
├─ CW Solo goals  
├─ CW Solo points  
├─ CW Solo ranking  
└─ CW achievements
```

COBEG information will never overwrite Cyber Warriors statistics.

3.4 🏆 Solo Tournament database

This is the heart of the entire website.

A tournament will have:

```
Tournament  
├─ Tournament ID
```

- └─ Tournament Name
- └─ Season
- └─ Tournament Type
- └─ Format
- └─ Match Structure
- └─ Start Date
- └─ End Date
- └─ Status
- └─ Logo/Banner
- └─ Description

Example:

```
Cyber Warriors Solo Championship
Season: 2026
Format: Knockout
Match Structure: Single Match
Status: Active
```

Or:

```
Cyber Warriors Solo Cup
Season: 2026
Format: Knockout
Match Structure: Two-Match Tie
Status: Active
```

3.5 Tournament Participants

A player doesn't permanently belong to every tournament.

Instead:

```
Tournament
  ↓
Participants
  ↓
Player A
Player B
Player C
Player D
...
```

So you can have:

Solo Tournament #1

20 players

and later:

Solo Tournament #2

32 players

without changing their main player profiles.

3.6 ✂ Tie / Matchup / Match

This is where we'll solve your **single-match** + **two-match** requirement.

We should NOT treat everything as just a "match."

Instead:

Single-match matchup

Tie #001
Player A vs Player B

└─ Match 1
 A 3 - 1 B

Two-match matchup

Tie #002
Player A vs Player B

```

├─ Match 1
│   A 2 - 1 B
├─
└─ Match 2
    A 0 - 2 B

```

Aggregate:

A 2 - 3 B

Winner: Player B

The exact aggregate/winner rule can be configured according to the tournament's rules.

This structure gives us the flexibility you asked for without breaking the statistics system.

3.7 Results

Every actual game will have an official result.

For example:

```

Match
├─ Match ID
├─ Tournament ID
├─ Tie ID
├─ Player A
├─ Player B
├─ Score A
├─ Score B
├─ Date
├─ Status
├─ Submitted By
└─ Submitted At

```

Once the result becomes official:

```

Result
  ↓
Statistics
  ↓
Standings
  ↓
Ranking
  ↓

```

```
Player Profile
```

```
Awards
```

That's the automatic chain we want.

3.8 Statistics

We should **not** manually type player statistics.

Instead, the system calculates them from official Solo results.

For example:

```
Player: Nion
```

```
Matches Played: 15
```

```
Wins: 10
```

```
Draws: 2
```

```
Losses: 3
```

```
Goals Scored: 31
```

```
Goals Conceded: 18
```

```
Goal Difference: +13
```

```
Points: 32
```

```
Win Rate: 66.67%
```

Because your rules are:

```
Win   = 3 points
```

```
Draw  = 1 point
```

```
Loss  = 0 points
```

So:

```
10 Wins × 3 = 30
```

```
2 Draws × 1 = 2
```

```
Total = 32 points
```

3.9 🏆 Ranking

Ranking will also be **automatic**.

Order:

- 1 Points
- 2 Goal Difference
- 3 Goals Scored
- 4 Wins

So nobody needs to manually edit:

"Nion is #1"

The system calculates it from the Solo database.

3.10 🏆 Awards

Awards will connect to the actual data.

For example:

Man of the Match
↓
Specific Match
↓
Player

And:

Player of the Week
Player of the Month
Man of the Tournament

can be connected to the appropriate tournament/statistical period.

Later we can decide exactly **which formula or criteria** each award uses.

3.11 📰 News

News will also be connected to the Solo system.

For example, after a tournament finishes:

🏆 Cyber Warriors Solo Cup Champion

Winner: Player X

Runner-up: Player Y

That can become a News post.

And the homepage can automatically show:

- Latest tournament
- Recent results
- Current ranking
- Recent awards
- Upcoming Solo fixtures

3.12 🗝️ Admin structure

We'll have:

👑 OWNER

You:

Full Control

Can manage:

- Players
- Solo tournaments
- Fixtures
- Results
- Ranking
- Awards
- News
- COBEG data
- Admins
- Settings

- Everything else

MATCH_ADMIN

Your 5–10 approved admins:

Create Fixture
Submit Result

Nothing else.

PLAYER

Normal player:

View website
View tournaments
View ranking
View profiles
View own account/profile

No control-panel privileges.

3.13 The complete data flow

This is the most important diagram:

This is the architecture I want us to build around. The Solo system is the source of truth for your main Cyber Warriors competitive data.

STEP 4 will be the actual Control Panel blueprint

We'll design the screens one by one, before touching code:

And I'll show you exactly what happens when you click Create Tournament , including every field, button, screen, and what happens after pressing Create.

That should be our next step before we start coding.

the homepage almost looks like the website;
<https://zuebd.xyz/>

Yes — **that changes the homepage plan slightly**. The homepage should be **very close in structure and overall feel to** `zuebd.xyz` , while the actual branding, content, player data, and Cyber Warriors identity remain your own.

I also have the `zuebd.xyz` source files you previously provided, so we can use those as the reference rather than guessing.

 Cyber Warriors Homepage

I suggest we build the homepage roughly like this:

CW LOGO

CYBER WARRIORS

⚙

YOUR CLUB SLOGAN

 HERO / CLUB INTRO

CYBER WARRIORS
One Team. One Goal.

[EXPLORE CLUB]

 HQ / CW NEWS

[News Card] [News Card]
[News Card] [News Card]

ALL NEWS →

 SOLO UPCOMING

Tournament / Round		
Player A	VS	Player B
Date / Time		

ALL SOLO →

PLAYER RANKING

- #1 Player
- #2 Player
- #3 Player
- #4 Player
- #5 Player

VIEW RANKING →

RECENT AWARDS

Player of the Week
Man of the Match
Player of the Month

CYBER WARRIORS

Players | Clubs | Teams

FOOTER

Facebook | Discord | ...

The key point

We won't make a generic dashboard-looking homepage.

The public homepage should feel like a **real esports/football club website**, with the same kind of:

- premium dark visual style
- strong club branding
- large section headings
- news cards
- upcoming Solo fixtures
- ranking section
- responsive mobile layout
- bottom navigation on mobile
- side navigation/menu
- polished cards and animations

The **big difference** is that everything will be connected to your Cyber Warriors database.

For example:

Admin creates Solo tournament → fixture appears on homepage automatically.

Admin submits result → recent result appears → player stats update → ranking updates
→ player profile updates.

Tournament finishes → winner/award information can feed into News and Awards.

So the homepage is basically the **front window of the entire Cyber Warriors system**.

And yes, I would treat `zuebd.xyz` as the **primary homepage reference**, not just a loose inspiration. We can reproduce the *type of layout and functionality* while designing Cyber Warriors' own branding and UI rather than making a direct copy.

Next, we should finalize the homepage section-by-section — header, navigation, hero, news, Solo upcoming, ranking, awards, footer, mobile navigation, etc. Then we'll lock the homepage before moving into the Control Panel UI.

      Sources

Today 10:39 AM

Help me finalize the homepage section-by-section

Worked for 7s >

Absolutely. Let's **lock the homepage section-by-section now**, using the uploaded `zuebd.xyz` source as the reference. The source confirms the reference uses a compact header with menu/branding/theme controls, a categorized side menu, an **HQ News** carousel, and a premium footer. `zuebd_xyz(1)` `zuebd_xyz(2)`

CYBER WARRIORS — HOMEPAGE BLUEPRINT

I recommend 10 sections.

1. Header — **MUST HAVE**

We keep the same general structure as the reference:

Left

- Hamburger menu
- Cyber Warriors logo
- **CYBER WARRIORS**
- Short slogan/tagline

Right

- Light/Dark theme toggle
- Optional player account button when signed in

The reference uses a hamburger menu, logo, two-line club branding, and theme control in the header. `zuebd_xyz(1)`

Cyber Warriors version

CYBER WARRIORS

Possible tagline:

ONE TEAM. ONE LEGACY.

We can change this later if you have a better official slogan.

2. Side Menu — MUST HAVE

When the ☰ button is pressed:

CYBER WARRIORS

COMPETE & PLAY

⌘ Solo

⌘ Team-Up

Coming Soon

⌘ League

Coming Soon

⌘ Friendly

EXPLORE

📰 News

🏆 Ranking

👤 Players

🏟 Clubs

👥 Teams

Coming Soon

CLUB

ℹ About

🔑 Sign In

The reference groups its navigation into categories such as **Compete & Play** and **Explore**, with icon-based links. zuebd_xyz(1)

Important

For your version:

Solo should be the most prominent competition section.

Because Solo is the core of Cyber Warriors' statistics system.

3. Hero / Club Introduction — MUST HAVE

This will be the first major visual area.

Something like:

But I **don't want this to become a huge generic landing-page hero.**

The reference is more like a club portal than a marketing website, so our hero should remain compact and elegant.

Dynamic information

We can eventually show:

These numbers should come from the database.

4. 📰 CW NEWS — ● MUST HAVE

This is one of the sections we should follow closely from the reference.

The source uses an **HQ News** heading, an **All News** button, and horizontally sliding news cards with large images and gradient overlays. zuebd_xyz(1)

Our version:

News can include

- Solo tournament winners
- Player of the Week
- Player of the Month
- Major player milestones
- Tournament announcements
- Cyber Warriors announcements
- Special achievements

And because Solo is our core:

Solo-related news should dominate the homepage news feed.

5. 🏆 SOLO UPCOMING — 🔴 MUST HAVE

This is probably the most important homepage section.

 SOLO UPCOMING

ALL SOLO →

CYBER WARRIORS SOLO CUP
Season 01 • Quarter Final

PLAYER A VS PLAYER B
[PHOTO] [PHOTO]

September 10 • 8:00 PM

Multiple fixtures can slide horizontally.

Automatically populated from:

So admins don't need to manually update the homepage.

6. 🏆 1 CURRENT RANKING — 🚫 MUST HAVE

This should be a compact ranking preview.

🏆 1

PLAYER RANKING

VIEW ALL →

#	PLAYER	PTS	GD
1	Player A	32	+15
2	Player B	29	+12
3	Player C	27	+9
4	Player D	24	+7
5	Player E	22	+5

VIEW FULL RANKING →

Critical

We will NOT manually enter these numbers.

They come from the Solo results.

Your ranking rules:

- 1. Points
- 2. Goal Difference
- 3. Goals Scored
- 4. Wins

And:

Win = 3
Draw = 1
Loss = 0

7. 📊 QUICK CLUB STATS — 🟡 RECOMMENDED

I'd add a small statistics strip.

CYBER WARRIORS

68	12	427
PLAYERS	SOLO CUPS	MATCHES
	1,284	
	GOALS	

These are automatically calculated.

But:

I would **not** make this a huge dashboard.

It should feel like a professional club website, not an admin panel.

8. 🏆 RECENT AWARDS — ● MUST HAVE

A compact carousel:

Possible cards:

- 🌟 Man of the Match
- 🏆 Player of the Week
- 👑 Player of the Month
- 🏅 Man of the Tournament

Clicking the card opens the relevant player/profile or award page.

9. 👤 CYBER WARRIORS — ● MUST HAVE

A small club section near the bottom.

CYBER WARRIORS

BUILT BY PLAYERS.
DRIVEN BY COMPETITION.

[VIEW PLAYERS]

60+ Players
Multiple Tournaments
One Community

Could also include:

PLAYERS CLUBS ABOUT

This gives visitors a natural route into the rest of the website.

10. Footer — MUST HAVE

We'll follow the **general structure** of the reference footer.

The reference has a club identity/tagline, social buttons, and copyright area.

zuebd_xyz(2)

Cyber Warriors:

CYBER WARRIORS

ONE TEAM. ONE LEGACY.

[Facebook] [Discord]

Home Solo Ranking Players
News About

© 2026 Cyber Warriors
All Rights Reserved.

Mobile Bottom Navigation

I also recommend keeping this from the reference's mobile-oriented approach.

Something like:

This makes the site feel much more like a dedicated esports/club platform on phones.

 FINAL HOMEPAGE ORDER

So the final homepage becomes:

MOBILE BOTTOM NAV

One thing I would change from the earlier plan

I wouldn't put "Recent Results" as a large standalone section on the homepage initially.

Instead, completed Solo results can appear naturally through **Solo**, tournament pages, player profiles, and News. If we later find the homepage needs it, we can add a compact **Recent Results** carousel.

That keeps the homepage closer to the clean, club-portal feel of the reference instead of overcrowding it.

Homepage structure is now essentially locked. The next design decision is the **exact visual style**: Cyber Warriors' colors, typography, card style, logo placement, backgrounds, buttons, and whether we want light + dark themes.
